Categories: Bushes

The AVFBNS range of bushes is designed to eliminate high frequencies whilst supporting high loads during operations. This is achieved through elastic deformation of the rubber under the effect of the external forces being applied to the metal tubes. The bushes are manufactured with the rubber assembled to the outer tube and bonded to the inner tube. All the AVFBNS bushes are manufactured in the standard 65 IRHD hardness.

Optional ordering with different elastomeric hardness and compounds. Optional ordering with smaller tolerances if required.

The information in this datasheet is provided for general purposes only and not meant to be a specific recommendation for any individual application. All values were determined under laboratory conditions. ASEC Products is not directly neither indirectly responsible for any claim resulting from the use of any information provided in this datasheet.
