Categories: Other bearings

AS2FD soft strip is based on PTFE and filled with graphite and other lubricants. It is made by pressing and sintering. This material has good elasticity, a low friction coefficient, and high wear resistance. It most commonly fits to be used along with a metal base. Providing excellent friction and wear performance, it can be used as a piston for shock absorber and oil cylinder. It is widely used in many car brands, including Volkswagen, Buick, etc.

Good elasticity. Works best with metal backing. Excellent low friction properties. Used in automotive industries at many car brands. High temperature resistant. Multi functional.
