Categories: Rubber bearings

ICON®

Range of Bush Bearings

- 4 start spiral pump bush
- Latest American Design
- Quick flushing out of sand and pebbles
- Specially formulated long-lasting Nitrile rubber
- Low wear and tear
- Better shaft balance
- Longer bush life

Smooth rubber surface, when lubricated with water, matches the extremely low friction of oil lubricated metal bearings like ball bearings. To this inherent property of rubber, other essential bearing qualities are added at ICON by skillful engineering and processing. ICON Bush Bearings are resistant to wear, corrosion and swelling in water. They absorb shock and vibration. Their grooves are designed for optimum water flow to cushion the shaft and their strong bonding is fail-safe.

ICON bearings are made from a specially compounded nitrile rubber that is oil and chemical resistant. The rubber is highly resistance to wear and abrasion making it tough and durable.

ASEC

CON® is India’s oldest and largest manufacturer of Rubber Bush Bearings and Neck Rings.

ICON® has been supplying bearings to pump manufacturers; OMS’s & pump maintenance companies for over 35 years.

Our Rubber Bearings cover a wide range of shaft diameters from 22mm to 52mm
