Categories: Cotton fabric phenol

AI PF CC 305 Is a friction reducing material consisting of phenolic resin and a very fine cotton fabric. Exclusively for mechanical applications, for example wear parts/vanes in air pumps. Good dry-run properties but can be lubricated with oil, grease or water. Well suited where narrow tolerances and low surface roughness are required.

Suitable for mechanical applications as wear parts/vanes in vacuum pumps. Suitable for dry running, can also be lubricated with water, oil or grease. Suitable for mechanical applications where fine tolerances and surface coarseness are required.

The information in this datasheet is provided for general purposes only and not meant to be a specific recommendation for any individual application. All values were determined under laboratory conditions.
