Categories: Other bearings

AS1FD soft strip's primary material is PTFE, with a mixture of copper, it is pressed and sintered into shape. It has a low friction coefficient and good anti-wear performance. Its tensile strength can meet the requirement of a mono piston ring. Because of its superior performance of low friction, AS1FD can be used with oil or without oil lubrication. AS1FD is the preferred car muffler and piston ring choice for many car brands, including Audi, Volkswagen, Citroën, etc.

Low friction coefficient. Good wear resistance. Usable in oil and oilless lubrication conditions. Suitable for piston rings. Superior low friction. Strong and thin.

The information in this datasheet is provided for general purposes only and not meant to be a specific recommendation for any individual application. All values were determined under laboratory conditions.
