Categories: Flange bearing

Standard linear bearings consist of a replaceable material sliding film, which is used in conjunction with anodized aluminum or steel shafts. The slide film is axially retained by means of a stop ring groove. the dimensions of ASEC linear plain bearings are identical to those of standard ball bearings: good performance at a significantly lower cost.

AS2NLRTM bearings are maintenance free and low noise. Unaffected by dirt and dust. Assembled with two AS2NL liners. Closed design with square flange in the middle. Secured by bolts. Anodized aluminum adapter. Compatible with: AS2ENL, AS2NL.
