Categories: Units and Sliders

Standard linear bearings consist of a replaceable material sliding film, which is used in conjunction with anodized aluminum or steel shafts. The slide film is axially retained by means of a stop ring groove. the dimensions of ASEC linear plain bearings are identical to those of standard ball bearings: good performance at a significantly lower cost.

AS11NLG has an aluminium alloy base with AS11NLR bearing. Closed design. Optional ordering all Plastics. Unaffected by dirt and dust.
