SLIDING BEARINGS ASBCM

SKU: ASBCM

ASEC Kunststoffen BV

Marketing 17, 6921 RE Duiven, The Netherlands

T: +31 316 84 44 01 | info@asec.nl

Categories: Plastic bearings

ASBCM clamp bearings are meticulously designed for the precise task of guiding shafts through sheet metal. Crafted from ASMPE material, they provide a unique combination of shock absorption and exceptional wear resistance. ASMPE material stands out as a plain bearing material renowned for its ability to withstand high levels of wear and shock under standard loads, rendering it ideal for dry running applications. Should lubrication oil be required, ASMPE-type materials seamlessly accommodate all commonly used lubricants.

Structural design. Side slots for easy installation. Lubrication-free, maintenance-free. Good wear resistance. Can be customised. For rotary and linear motion.

The information in this datasheet is provided for general purposes only and not meant to be a specific recommendation for any individual application. All values were determined under laboratory conditions.
