Categories: Various

Low frequency elastomeric noise and vibration isolators for industrial equipment and machinery. The AVSWR range of mounts are normally used to insulate the transmission of noise and vibration in vertically applied loads. Their applications can include generators, blowers, pumps, road machines or any equipment that by design is unbalanced. They can also be used for isolating instrumentation in mobile, military or road and can accommodate loads between 650 kg to 7650 kg per mount.

Alternative elastomeric hardness and compounds available

The information in this datasheet is provided for general purposes only and not meant to be a specific recommendation for any individual application. All values were determined under laboratory conditions.
