Categories: Bronze bearings

ASBH ultra-high hardness impregnated brass solid lubrication bearing is further improved upon AS1B by adjusting a high hardness brass casting process to raise its hardness further, maximizing its load-bearing capacity and wear-resistant property. Due to its reduced ductility, high-impact applications should be avoided. Also, the Flange bearing's high hardness during the design of the bearing set high hardness shaft should be selected to prevent premature shaft wear. ASBH is widely used in mining equipment, engineering equipment, and injection-molding machines, etc.

High load performance. Extreme low shaft wear. Precise bearings with narrow tolerances. Large number of sizes. With lubrication plugs. Maintenance-free.
