Categories: Plastic

Spherical balls constructed from highly wear-resistant ASWPE1, paired with housings made of high-strength, shape-stable M163, ensure maintenance-free dry operation. They resist dust and dirt, compensate for misalignment errors, and offer absolute corrosion resistance. With their lightweight design, they guarantee easy installation.

The information in this datasheet is provided for general purposes only and not meant to be a specific recommendation for any individual application. All values were determined under laboratory conditions.
