Categories: Plastic

A spherical ball crafted from exceptionally durable ASWPE1 material is paired with a high-strength, shape-stable M163 connection rod. This system operates without the need for maintenance, ensuring reliable performance. Resistant to corrosion, it operates silently and is non-conductive. Serving as a mechanical connector between two components, it compensates for misalignment errors and offers flexibility in the distance between them.

The information in this datasheet is provided for general purposes only and not meant to be a specific recommendation for any individual application. All values were determined under laboratory conditions.
