Categories: Plastic

The housing comprises high-strength plastic, ensuring durability. Featuring maintenance-free, self-lubricated balls, it's ideal for high-load, low-speed operations. Self-compensation accommodates installation deviations, while impact resistance ensures silent operation. Dust-resistant and lightweight, it's suitable for rotational, oscillatory, and linear operations.

The information in this datasheet is provided for general purposes only and not meant to be a specific recommendation for any individual application. All values were determined under laboratory conditions.
