Categories: Plastic

The spherical ball is expertly crafted from ASWPE1, renowned for its exceptional wear resistance, while the connection rod is forged from the robust and shape-stable M163 material. Operating smoothly without the need for maintenance, its sleek design prevents the accumulation of dirt. With absolute corrosion resistance, it effortlessly compensates for misalignment errors, ensuring noise-free and lightweight performance.

The information in this datasheet is provided for general purposes only and not meant to be a specific recommendation for any individual application. All values were determined under laboratory conditions.
